

Upgrade multi-user to 2.6

Timeless Time & Expense version 2.6 is a free upgrade for registered users. Upgrading to version 2.6 is as easy as downloading the full 2.6 installation and installing over your existing installation. If you are upgrading from version 1.40, be sure to upgrade your database during the installation. While the multi-user database is identical in structure to version 2.0, it contains a new report type. If one user creates a shared Progress report in version 2.5+ and another user still has version 2.0, the report will not run. Assignment to do entries will also not be displayed for 2.0 users. For this reason, we recommend upgrading all user to version 2.5+ at the same time. If you are upgrading from version 1.40.x, you must upgrade the database first, followed by all client workstations. Once the database has been upgraded, 1.40.x clients will not be able to access the upgraded database. Trial user can upgrade their trial version. However, it will not extend or reset the trial period.
