What is new in the upgrade to 2.6?

Timeless Time & Expense 2.6 include the new Timesheet view and ability to copy portions of the task hiearchy. The timesheet view provides an easy way to view or enter a week's worth of time.Timeless Time & Expense 2.5 includes the new Progress Report. This report allows you to easily track project status. It is like a summary report for entire tasks including variances from time estimates as well as from due dates. The complete dates are tracked through 'Assignment' to do entries. In the single-user version, to do entries are 'flagged' as assignment entries when created. Only one To Do entry per Task hierarchy is allowed, as the assignment entry is used for tracking the status of the task. In the multi-user version, Assignments are created from the Task Properties. These assignments are shown as To Do entries for the each user the task was assigned to. Different estimates and due dates may be entered for each user.
