

Using Timeless Windows and Web together

The Web interface can be used with the Windows interface of Timeless Time & Expense or Timeless Project Tracking. However, it cannot use MS Access as a database option. If you are using MS Access, you must first install one of the other database options and convert your database. Reinstall Timeless Time & Expense Enterprise Windows, selecting the new database. Be sure all clients are connecting to the new database. Finally, install the web version of Timeless Time & Expense or Timeless Project Tracking, selecting the same database as the Windows interface uses.
